

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

is made to the first record of the plant in Italian literature, as well as subsequent mention by later writers. This volume is the result of much painstaking labor, and it presents a mass of historical information in epitomized form. An excellent bibliographical catalogue adds materially to the value of the publication as a work of reference.—J. M. Greenman.

NOTES FOR STUDENTS

Current taxonomic literature.—H. DE BOISSIEU (Bull. Soc. Bot. Fr. IV. 9:348-355. 1909) describes several new species and varieties of Umbelliferae from China, and proposes a new genus (Chaerophyllopsis) of this family, which is referred to the tribe Ammineae.—J. D. HOOKER (Kew Bull. 1909: 281-280) in a "Review of the known Philippine Islands species of Impatiens" recognizes 25 species and precedes their enumeration by a determinative key.—C. H. WRIGHT (ibid. 308) has published a new genus (Neodregea) of the Liliaceae from South Africa.—F. J. SEAVER (Mycologia 1:177-207. pl. 13. 1909) under the title "The Hypocreales of North America II" gives a systematic treatment of the tribe Creonectrieae, recognizing 11 genera to which are definitely referred 38 species; 11 additional species are mentioned as of doubtful generic affinity. Five of the genera (Sphaerodermatella, Creonectria, Macbridella, Scoleconectria, and Thyronectroidea) are new, and of the 38 species 29 form new combinations.—F. D. KERN (ibid. 208-210) records a new species of Gymnosporangium from Colorado.— F. D. HEALD (ibid. 215-217. pl. 14) describes and illustrates a new species of Discosia parasitic on pine seedlings at Halsey, Nebraska.—F. OSTERMEYER (Ann. K. K. Naturhist. Hofmus. 22: 128-142. 1907-1908) publishes a list of about 300 plants collected in Brazil in 1860 by Dr. Theo. Peckholt; the list contains, among other novelties, a new species of Cryptocarya.—F. Kränzlin (ibid. 1911-1996. pls. 3, 4) under the title "Beiträge zur Kentniss der Gattung Calceolaria" has published new species of this genus from Central and South America.—A. Brand (Philip. Jour. Sci. 4:107-110. 1909) has described 5 new species of Symplocos from the Philippine Islands.—E. B. COPELAND (ibid. 111-115) in continuation of his studies on Philippine ferns records 7 new species and proposes one new genus (Currania).—E. D. MERRILL (ibid. 117-128) presents a "Revision of the Philippine Connaraceae," recognizing 5 genera and 17 species of which 8 are described as new; the same author (ibid. 129-153) under the title "A revision of Philippine Loranthaceae" recognizes 6 genera and 53 species of which 19 are new; one new genus (Cleistoloranthus) is proposed.—H. N. RIDLEY (ibid. 155-199) gives a synopsis of the Scitamineae of the Philippine Islands. The group includes four families, as follows: Zingiberaceae with 15 genera and 61 species, Marantaceae with 4 genera and 7 species, Cannaceae with 1 genus and 2 species, and Musaceae with I genus represented by I endemic and 4 cultivated species. Several species are here described for the first time.—A. DECANDOLLE (Leafl. Phil. Bot. 2:633-638. 1909) gives a "Revision of the Philippine species of Elaeocarpus," in which 16 species are recognized, 3 being new.—A. ENGLER (Bot. Jahrb. 43:303-381. 1909), in cooperation with several botanists, under the title

"Beiträge zur Flora von Afrika XXXV" has published 125 new species and several varieties of flowering plants. The following new genera are proposed: Lingelsheimia, Baccaureopsis, and Milbraedia of the Euphorbiaceae, Pierrina of the Scytopetalaceae, and Ledermanniella of the Podostemonaceae. The contribution is based chiefly on the collections of Dr. J. MILBRAED.—O. MÜLLER (ibid. Beibl. No. 100. pp. 1-40. pls. 1, 2) lists a large number of Bacillariaceae from southern Patagonia from the collections of E. NORDENSKIÖLD and O. BORGE. Several new species and varieties are described.—E. L. Greene (Rep. Nov. Sp. 7:195-197. 1909) under the title "Novitates Boreali-Americanae IV" has published 7 new species of sympetalous plants.—J. R. Drummond (Curtis' Bot. Mag. IV. 5:t. 8271. 1909) describes and illustrates a new species of Agave from Central America. M. GURKE (Monats. Kakteenk. 19:116-121. 1909) describes and figures a new species of cactus (Cephalocereus DeLaetii) indigenous to Mexico.-W. FAWCETT and A. B. RENDLE (Jour. Bot. 47:263-266. 1909) in continuation of their studies on Jamaican orchids have published 6 new species and include 1 new genus (Harrisella) which is based on Aeranthus porrectus Reichb.—A. and E. S. GEPP (ibid. 268, 269) have described a new species of Udotea from St. Thomas.—W. A. MURRILL (Mycologia 1:140-160. 1909) in a second article on the "Boletaceae of North America" gives a synopsis of the genus Ceriomyces, recognizing 35 species, and (ibid. 218, 219) describes a new species of this genus from the volcano of Turrialba, Costa Rica.—E. ROSENSTOCK (Rep. Nov. Sp. 7:146-150, 1909) under the title "Filices Novae V" describes new species of ferns, 3 of which are from Ecuador.—F. C. CLEMENTS and H. L. SHANTZ (Minn. Bot. Studies 4:133-135. pl. 20. 1909) have proposed a new genus (Eucapsis) of the blue green algae; the genus is represented at present by a single known species (E. alpina) from Colorado.—C. H. PECK (Bull. Torr. Bot. Club 36:153-157. 1909) has published 10 new species of North American fungi.—J. K. SMALL (ibid. 150-164) in an article entitled "Additions to the flora of peninsular Florida" records several species hitherto unknown from the mainland and describes 5 new species.—A. D. E. ELMER (Leafl. Philip. Bot. 2:595-629. 1909) has described 11 species and 2 varieties of Philippine plants as new to science. Synopses of the Philippine species of Fagraea, Artocarpus, and Hydrocotyle are given, and a new generic name (Adelmeria Ridl.) is proposed to take the place of Elmeria recently described in this journal.—I. M. GREENMAN.

Corn breeding.—Several recent papers have appeared advocating the use of hybridization methods in the production of Indian corn, instead of the usual earto-the-row method which is based upon the idea of isolation of pure types. As early as 1893 and 1894 Gardner and Morrow⁶ showed that crosses between different strains of corn give somewhat increased yields over either of the parent strains, and a method was outlined by which this advantageous circumstance could

⁶ MORROW, G. E., AND GARDNER, F. D., Bulletins 25 and 31, Illinois Agricultural Experiment Station. 1893, 1894.
